# SlimBrowser

**SlimBrowser** is a tabbed multiple-site web browser from FlashPeak that uses the Microsoft Trident layout engine.[1] It incorporates a large collection of features like built-in popup killer, skinned window frame, form filler, site group, quick-search, auto login, hidden sites, built-in commands and scripting, online translation, script error suppression, blacklist/whitelist filtering, and URL Alias.

SlimBrowser was one of the twelve browser choices offered to European Economic Area users of Microsoft Windows in 2010.[2]

Since V6.0, SlimBrowser has adopted a multi-process architecture to improve stability and eliminate performance restrictions associated with traditional single-process browsers. SlimBrowser included a full-featured form filler with the support of multiple identities in V6.01.

FlashPeak has also released two SlimBrowser clones with different engines from Trident: The cross-platform **Slimjet** which uses Chromium and **SlimBoat** which used WebKit[3], but SlimBoat is no longer supported. Flashpeak also recommends users of SlimBrowser to upgrade to SlimJet because support for SlimBrowser will be dropped in the near future.
